

systemc ergoNext

The ergonomic handle with digital coin lock

Digital

With ergoNext, systemc has developed the next generation shopping trolley handle. Whether with integrated digital deposit lock, conventional coin deposit lock or both, ergoNext can do everything. It can, of course, simply be delivered without deposit locks of any kind.

EASY

The EASY smartphone holder can be integrated into the ergoNext allowing the customer to use their smartphone and have their hands free while shopping. The smartphone is simply slid into the holder and remains in place.

Ergonomic and antistatic

The ergonomic design of the Ergosticks ensures optimal transmission of steering forces and makes even heavily loaded shopping trolleys easy to steer. In addition, the sticks have an inbuilt antistatic function which prevents the built up of static and stops annoying electric shocks.
