# variloc heavy: Tried & Trusted & Robust

variloc heavy is designed for extremely heavy use. Both the housing and clamping element are made from metal and are thus particularly strong. The high-strength powder coating

used on the die-cast zinc housing originates from the automotive industry and is extremely durable. The clamping element attaches tightly to the handlebar, offering little opportunity for vandalism.

The drilling screw reaches right into the handlebar, ensuring a solid fit and stops the lock from turning. variloc can also be supplied with a metal interior for demanding areas of application.

Metal housing and clamping element.

4

## 1 Compatible

The well proven S-shaped key that is used with the variloc makes it compatible to the systec smartloc and duraloc.

## 2 Well proven

The key is small and light which provides for easy handling. Due to its S-shape it is extremely stable.

## 3 Durable connection

The joint between key and chain is rock solid. The plastic casing is moulded around this joint and therefore extremely resilient.

## 4 Reduced costs

To reduce costs, the key and chain are also available with a yellow chromated coating.

# The Number 1 for coin deposit locks

Founded in 1974, systec developed the first patented coin lock for shopping trolleys in 1981. Since that date, systec has become the global and technology leader in this field. Its products now range from coin deposit locks and antistatic handlebar systems, trolley advertising systems to child safety and anti-theft systems for shopping trolleys. systec is the supplier to all leading shopping trolley manufacturers and exports its products to more than 50 countries.
